

```
1  #what is a function?
2  # = A function is a block of code which only runs when it is called.
3  # you can pass data, known as parameter, into function.
4  # A function can return data as a result.
5
6  #####CREATING A FUNCTION
7
8  #in python a function is defined using the keyword:
9
10 #There are mainly two types of function.
11
12 #user defoind functions: the user defined function defined by the user to perform
13 #the specific task.
14
15 #BUILT IN FUNCTION: The buikd function are those function thar are predefined
16 #in python.
17
18 # How to create a function.
19
20 '''def x():
21     print("hello")'''
22
23 #how to call a function
24
25 '''def x():
26     print("hello")
27
28 x()
29
30 x()
```
